

Similarity Search with Word Embeddings

@EvanGriffin

@Version Java 19

Description

This is a console based application that allows the user to specify a word they would like to compare / search the words kept within the supplied file.

To Run

From console at .jar file directory :

```
java -cp ./dsa.jar ie.atu.sw.Runner
```

Features

- Allows user to choose what file they want to read into the Map
- Allows user to choose what file name they want to write to
- Allows user to choose between entering a sentence or a word
- After user enters there chosen text the application will compare its vector with the embedded text stored within the map
- Engaging MultiColor UI
- Ability to exit application within the console
